Looks like OPP has only 2 questions to respond to in the SEPW QFRs: Cramer #10 and #11. I'm assuming I can work with Denise Rice and Steve for the GLP and PRIA question (10), but who should I work with to help prepare the response to #11? We have some time.

Sen. Cramer:

10. EPA has a premier audit and inspection program for Good Laboratory Practices (GLPs), recognized worldwide. However, EPA does not issue certificates of GLP compliance for laboratories, as other nations do, that would make it easier for many regulatory authorities in countries around the world to recognize the GLP credentials of regulatory studies conducted in the US. This places US contract research laboratories and US businesses at an economic and competitive disadvantage in seeking product marketing approvals in those countries and exporting their products and services. EPA has recently received additional funding from PRIA4 to enhance the GLP program. What specific changes to US regulations and/or legislation would be necessary to allow/require EPA to issue such GLP certificates? What changes could be made under President Trump's May 19, 2020 Executive Order 13924 on economic recovery from COVID-19 to accomplish this?

11. The robust and rigorous pesticide regulatory program administered by the EPA is highly regarded by governments around the world. Many trading partners welcome imports of trusted pesticide products from US sources, which have the benefit of our regulatory program, but they need reasonable assurance of the source of the products, in order to combat contraband and counterfeits that are significant problems in some countries. Such counterfeit products can have a potentially harmful effect here at home in the form of residues on foods imported into the United States, from pesticide products of unknown origin and dubious quality. Four years ago, EPA discontinued its policy of providing

Certificates of Origin for exported pesticide products to provide this assurance to importing countries, causing no small disruption for US businesses and their international customers. The fee-for-service language of FIFRA authorizes EPA to issue “Letters of Certification” for pesticide products, but the Agency has chosen not to include Certificates of Origin under this provision. What policy change could be made under the recent Executive Order 13924 (May 19, 2020; “Regulatory Relief To Support Economic Recovery”) to resume issuing Certificates of Origin?

Hi Darlene, looks like you're on the original email and it looks like we only have two QFRs for OPP both from Cramer.
